

Case study

College management system

Introduction:

College management encompasses the diverse and complex operations necessary for the efficient functioning of higher education institutions. This case study delves into the multifaceted aspects of college management, examining how administrative processes, resource allocation, and stakeholder engagement contribute to achieving institutional goals.

This case study delves into the application in managing diverse data sets within a college environment. SQL, a powerful tool for database management, plays a crucial role in organizing, retrieving, and analyzing data essential for decision-making across various administrative functions. This study examines how SQL is utilized to streamline processes such as student enrollment, attendance tracking, academic performance monitoring, and resource allocation. By leveraging SQL queries and database management systems, college administrators can efficiently handle large volumes of data, maintain data integrity, and generate insightful reports to support strategic decision-making. Throughout this case study, we will explore real-world to extract actionable insights from student records, faculty schedules, financial transactions students marks student all details to handle many records in sql.

Dataset:

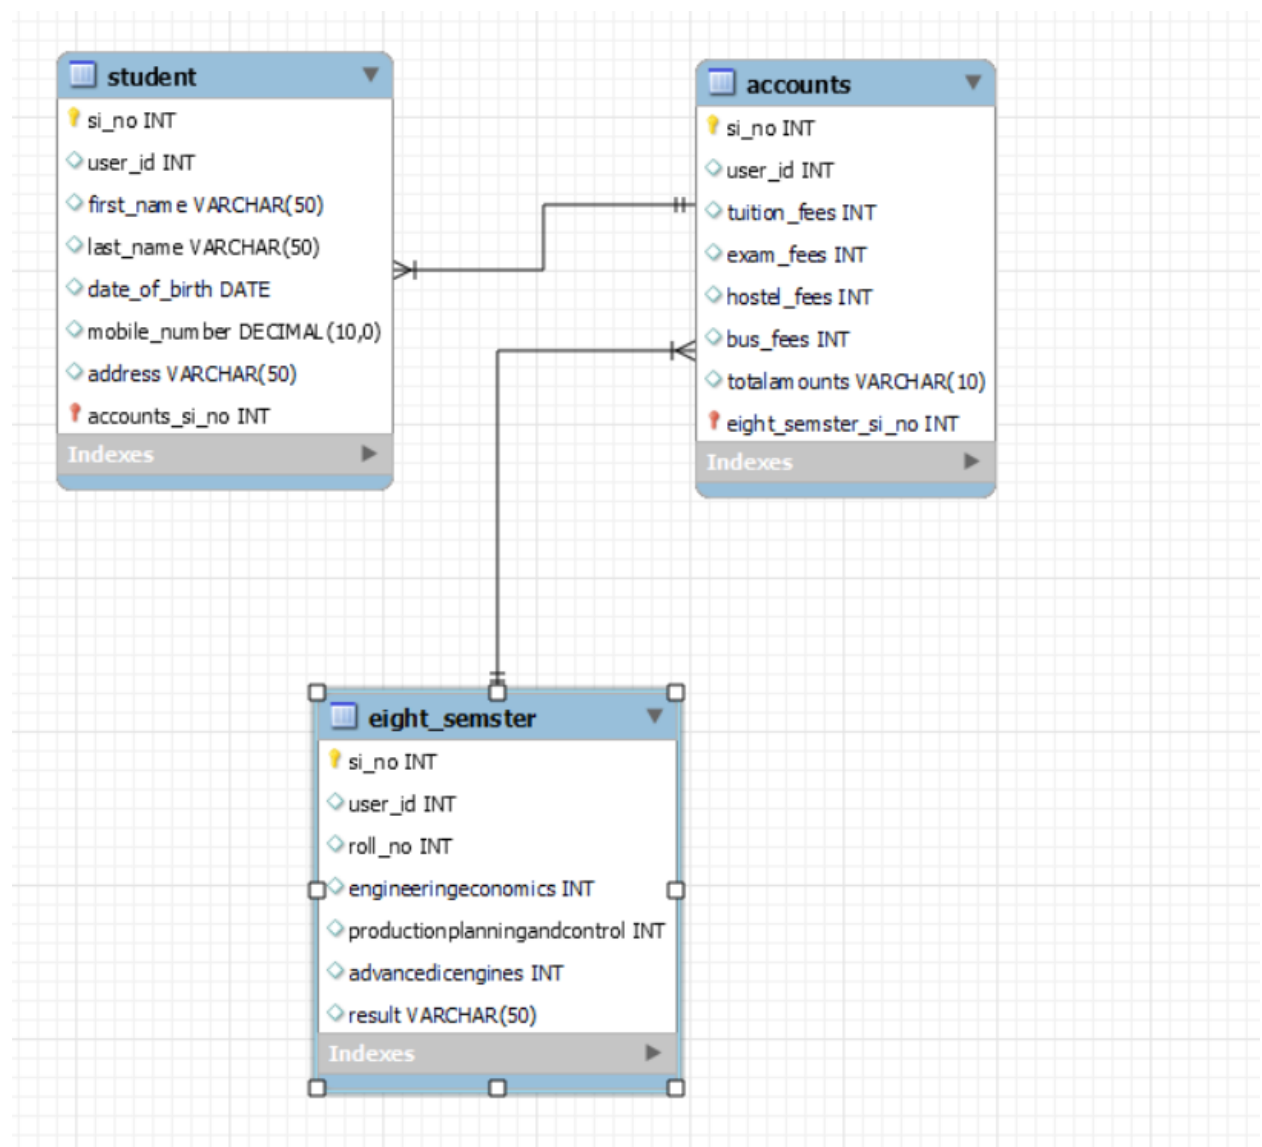

create database college;

use college;

select* from student;

select* from accountst;

select* from eight_semster;

Create table & insert data:

```
create table student
```

```
(si_no int auto_increment not null,
```

```
user_id int,
```

```
first_name varchar(50),
```

```
last_name varchar(50),
```

```
date_of_birth date,
```

```
mobile_number numeric(10),
```

```
address varchar(50),
```

```
primary key (si_no) );
```

```
select*from student;
```

```
insert into student values (1,201,"ram","kumar",'2000-12-10',9632154870,"race_course");
```

```
insert into student values (2,202,"surya","prasanh",'2001-09-13',6543210987,"vijaynager");
```

```
select*from student;
```

```
insert into student values (3,203,"jaya","ram",'1999-11-25',9632587402,"ncccolouny");
```

```
insert into student values (4,204,"tamil","selvan",'2002-12-10',6543219873,"hopecolouny");
```

```
insert into student values (5,205,"selva","kumar",'2003-10-25',9632587412,"ramanapuram");
```

```
insert into student values (6,206,"suresh","raja",'2001-09-26',9875236403,"ukkadam");
```

```
insert into student values (7,207,"ramesh","kumar",'2003-11-26',6789453021,"peelamedu");
```

```
insert into student values (8,208,"hari","haran",'2002-06-12',9563214721,"sulur");
```

Create table & insert data:

```
create table accounts (
```

```
si_no int auto_increment not null,
```

```
user_id int,
```

```
tuition_fees int,
```

```
exam_fees int,
```

```
hostel_fees int,
```

```
bus_fees int,
```

```

primary key (si_no));

select * from accounts;

insert into accounts (si_no,user_id,tuition_fees,exam_fees,hostel_fees)
values (1,201,40000,3500,6500);

insert into accounts (si_no,user_id,tuition_fees,exam_fees,bus_fees)
values (2,202,45000,3500,6000);

insert into accounts (si_no,user_id,tuition_fees,exam_fees,hostel_fees)
values (3,203,45500,3800,7000);

insert into accounts (si_no,user_id,tuition_fees,exam_fees,bus_fees)
values (4,204,60000,4600,6500);

insert into accounts (si_no,user_id,tuition_fees,exam_fees,bus_fees)
values (5,205,55000,4300,7500);

insert into accounts (si_no,user_id,tuition_fees,exam_fees,hostel_fees)
values (6,206,65000,4500,9500);

insert into accounts (si_no,user_id,tuition_fees,exam_fees,hostel_fees)
values (7,207,60000,4200,8500);

insert into accounts (si_no,user_id,tuition_fees,exam_fees,bus_fees)
values (8,208,65000,4000,8200);

```

Create table & insert data:

```

create table eight_semster(
si_no int auto_increment not null,
user_id int,
roll_no int,
engineeringeconomics int,
productionplanningandcontrol int,
advancedicengines int,
result varchar(50),
primary key (si_no));

```

```
select * from eight_semster;
```

```
insert into eight_semster  
(user_id,roll_no,engineeringeconomics,productionplanningandcontrol,advancedicengines,re  
sult)
```

```
values (201,20231,60,80,94,'pass');
```

```
select*from eight_semster;
```

```
insert into eight_semster  
(user_id,roll_no,engineeringeconomics,productionplanningandcontrol,advancedicengines,re  
sult)
```

```
values (202,20232,40,80,86,'fail');
```

```
insert into eight_semster  
(user_id,roll_no,engineeringeconomics,productionplanningandcontrol,advancedicengines,re  
sult)
```

```
values (203,20233,72,35,82,'fail');
```

```
insert into eight_semster  
(user_id,roll_no,engineeringeconomics,productionplanningandcontrol,advancedicengines,re  
sult)
```

```
values (204,20234,89,95,82,'pass');
```

```
insert into eight_semster  
(user_id,roll_no,engineeringeconomics,productionplanningandcontrol,advancedicengines,re  
sult)
```

```
values (205,20235,96,86,91,'pass');
```

```
insert into eight_semster  
(user_id,roll_no,engineeringeconomics,productionplanningandcontrol,advancedicengines,re  
sult)
```

```
values (206,20236,89,95,82,'pass');
```

```
insert into eight_semster
(user_id,roll_no,engineingeconomics,productionplanningandcontrol,advancedicengines,result)
values (207,20237,89,82,32,'fail');
```

```
insert intoeight_semster
(user_id,roll_no,engineingeconomics,productionplanningandcontrol,advancedicengines,result)
values (208,20238,89,95,86,'pass');
```

Case study questions & answers:

1.How to get student table in assending order ?

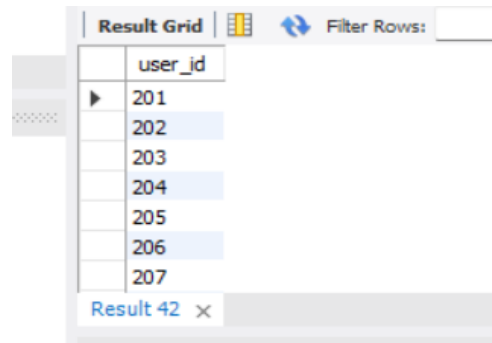

```
select* from student order by first_name asc;
```

Result Grid							
Filter Rows: <input type="text"/>							
Edit:   							
Export/Import:  							
Wrap Cell							
	si_no	user_id	first_name	last_name	date_of_birth	mobile_number	address
▶	8	208	hari	haran	2002-06-12	9563214721	sulur
◀	3	203	jaya	ram	1999-11-25	9632587402	ncccolouny
	1	201	ram	kumar	2000-12-10	9632154870	race_course

student 45 x

2.How can I retrieve all unique user_id from the student table ?

```
select Distinct (user_id) from student;
```

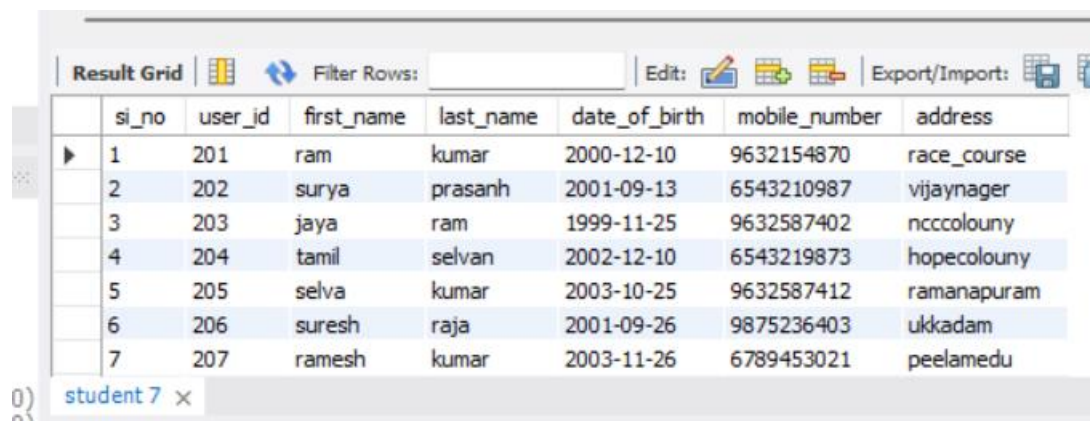

The screenshot shows a 'Result Grid' window with a 'Filter Rows' field. The grid displays a single column labeled 'user_id' with values 201, 202, 203, 204, 205, 206, and 207. The window title is 'Result 42'.

user_id
201
202
203
204
205
206
207

3.How to Retrieves all column name and rows from the student tables?

```
select * from student;
```

The screenshot shows a 'Result Grid' window with a 'Filter Rows' field and 'Edit' and 'Export/Import' buttons. The grid displays all columns and rows from the 'student' table. The window title is 'student 7'.

	si_no	user_id	first_name	last_name	date_of_birth	mobile_number	address
▶	1	201	ram	kumar	2000-12-10	9632154870	race_course
